

TechMart Electronics - Installation & Setup Guide

This guide explains how to install, configure and troubleshoot TechMart smart-home products. It is intended for customers as well as the AI Knowledge Base used by the Customer Support Assistant.

General Installation Requirements

- Stable Wi-Fi (2.4 GHz recommended).
- Latest TechMart Home App installed.
- Bluetooth enabled during first-time setup.
- Keep the product within router range.
- Use the supplied power adapter only.

Installation Workflow

- Unbox the product and verify all accessories.
- Power on the device.
- Install the TechMart Home mobile application.
- Create or sign in to your TechMart account.
- Scan the QR code or enter the device serial number.
- Connect the device to Wi-Fi.
- Wait for firmware update (if available).
- Assign the device to a room.
- Test all major features.
- Complete installation.

Product Specific Setup Notes

Smart Speaker

The Smart Speaker follows the standard TechMart installation process. Verify power supply, pair with the TechMart Home App, complete firmware updates, run the built-in diagnostics, and confirm connectivity before daily use.

Smart Camera

The Smart Camera follows the standard TechMart installation process. Verify power supply, pair with the TechMart Home App, complete firmware updates, run the built-in diagnostics, and confirm connectivity before daily use.

Smart Doorbell

The Smart Doorbell follows the standard TechMart installation process. Verify power supply, pair with the TechMart Home App, complete firmware updates, run the built-in diagnostics, and confirm connectivity before daily use.

Smart Display

The Smart Display follows the standard TechMart installation process. Verify power supply, pair with the TechMart Home App, complete firmware updates, run the built-in diagnostics, and confirm connectivity before daily use.

Smart Plug

The Smart Plug follows the standard TechMart installation process. Verify power supply, pair with the TechMart Home App, complete firmware updates, run the built-in diagnostics, and confirm connectivity before daily use.

Smart Bulb

The Smart Bulb follows the standard TechMart installation process. Verify power supply, pair with the TechMart Home App, complete firmware updates, run the built-in diagnostics, and confirm connectivity before daily use.

Smart Switch

The Smart Switch follows the standard TechMart installation process. Verify power supply, pair with the TechMart Home App, complete firmware updates, run the built-in diagnostics, and confirm connectivity before daily use.

Smart Thermostat

The Smart Thermostat follows the standard TechMart installation process. Verify power supply, pair with the TechMart Home App, complete firmware updates, run the built-in diagnostics, and confirm connectivity before daily use.

Smart Lock

The Smart Lock follows the standard TechMart installation process. Verify power supply, pair with the TechMart Home App, complete firmware updates, run the built-in diagnostics, and confirm connectivity before daily use.

Smart Smoke Detector

The Smart Smoke Detector follows the standard TechMart installation process. Verify power supply, pair with the TechMart Home App, complete firmware updates, run the built-in diagnostics, and confirm connectivity before daily use.

Smart Water Sensor

The Smart Water Sensor follows the standard TechMart installation process. Verify power supply, pair with the TechMart Home App, complete firmware updates, run the built-in diagnostics, and confirm connectivity before daily use.

Smart Robot Vacuum

The Smart Robot Vacuum follows the standard TechMart installation process. Verify power supply, pair with the TechMart Home App, complete firmware updates, run the built-in diagnostics, and confirm connectivity before daily use.

Smart Air Purifier

The Smart Air Purifier follows the standard TechMart installation process. Verify power supply, pair with the TechMart Home App, complete firmware updates, run the built-in diagnostics, and confirm connectivity before daily use.

Smart Fan

The Smart Fan follows the standard TechMart installation process. Verify power supply, pair with the TechMart Home App, complete firmware updates, run the built-in diagnostics, and confirm connectivity before daily use.

Smart Garage Controller

The Smart Garage Controller follows the standard TechMart installation process. Verify power supply, pair with the TechMart Home App, complete firmware updates, run the built-in diagnostics, and confirm connectivity before daily use.

Smart Power Strip

The Smart Power Strip follows the standard TechMart installation process. Verify power supply, pair with the TechMart Home App, complete firmware updates, run the built-in diagnostics, and confirm connectivity before daily use.

Smart Home Hub

The Smart Home Hub follows the standard TechMart installation process. Verify power supply, pair with the TechMart Home App, complete firmware updates, run the built-in diagnostics, and confirm connectivity before daily use.

Smart Wi-Fi Extender

The Smart Wi-Fi Extender follows the standard TechMart installation process. Verify power supply, pair with the TechMart Home App, complete firmware updates, run the built-in diagnostics, and confirm connectivity before daily use.

Smart Baby Monitor

The Smart Baby Monitor follows the standard TechMart installation process. Verify power supply, pair with the TechMart Home App, complete firmware updates, run the built-in diagnostics, and confirm connectivity before daily use.

Smart Pet Feeder

The Smart Pet Feeder follows the standard TechMart installation process. Verify power supply, pair with the TechMart Home App, complete firmware updates, run the built-in diagnostics, and confirm connectivity before daily use.

LED Status Indicators

LED Pattern	Meaning
Blinking Blue	Pairing Mode
Solid Green	Connected Successfully
Blinking Red	Connection Failed
Solid Red	Hardware Error
Yellow	Firmware Update in Progress

Factory Reset

- Press and hold the reset button for 10 seconds.

- Wait until the LED flashes blue.
- Reconfigure the device using the mobile app.

Installation Troubleshooting

- Restart router if Wi-Fi is not detected.
- Move closer to the router.
- Ensure Bluetooth permissions are enabled.
- Update the TechMart Home application.
- Reset and pair the device again.
- Contact TechMart Support if the issue continues.

Frequently Asked Questions

- Can I install multiple devices using one account? Yes.
- Can I use mobile hotspot instead of Wi-Fi? Not recommended.
- What if firmware update fails? Retry after restarting the device.
- How do I move a device to another room? Edit the room from the mobile app.
- Can one device be shared with family members? Yes.
